**Flowers, Shrubs, Trees, Lawns, Berries,
Vegetables, Fruit, and other Root Crops**

Maxicrop USA, Inc.
P.O. Box 964, Arlington Heights, IL 60006

NET WEIGHT 44 LBS.

Florida Reg. No. 0024-0640

MAXICROP SOLUBLE SEAWEED POWDER

PREPARATION FOR USE:

Maxicrop soluble seaweed powder is highly soluble. The powder dissolves instantly in water with only a minimum of stirring. Stir water constantly and pour the powder slowly. Warm water will hasten this process.

PROPORTIONS:

Two-thirds of a pound (10.7 oz.) liquifies into 1 gallon of stock solution. The 10 lb. box makes 15 gallons of a stock solution and covers 5 acres. The 22 lb. box makes 33 gallons of a stock solution and covers 11 acres. The 44 lb. box makes 66 gallons of a stock solution and covers 22 acres. The stock solution is a concentrated liquid Maxicrop which is then diluted with water before use (as per instructions for various crops).

For farmers and growers with the proper equipment, there is no need to dissolve the powder ahead of time. Just measure out the right amount of powder to be used and pour it right in the tank.

The Maxicrop soluble seaweed powder can be mixed with other spray and fertilizer materials.

STORAGE:

The Maxicrop soluble seaweed powder is harmless and non-flammable. The powder keeps indefinitely without any preservative. It must be kept tightly closed in the container since the powder attracts moisture.

DIRECTIONS FOR USE

ROOT INJECTIONS:

One (1) lb. Maxicrop soluble powder to 100 gallons. Insert into soil to a depth of 10-12 inches and spaced three feet apart (around the drip line).

SEED TREATMENT BEFORE PLANTING:

Wet thoroughly in a solution of 1:100. Allow seeds to dry before planting.

TRANSPLANTING:

Apply 1/6 lb. (2.7) of Maxicrop soluble powder to 50 gallons. The same plant can also be dipped in solution of 1:100 before planting.

GENERAL USE:

Apply 2 lbs. of Maxicrop soluble powder per acre per growing season. Apply the first application when there is sufficient foliage to absorb Maxicrop, the second application before bloom, the third application at bloom.

The above recommendations are approximate and give a fair guide to the best rate of application. The grower/farmer can use any quantity of water that is practical in the operation as long as complete coverage is obtained.

Maxicrop can be applied by hand sprayer, farm boom sprayer, or by aircraft sprayer. Maxicrop is compatible with most commonly used sprays.
