

# Rootshield Plus

*(Trichoderma harzianum strain T-22, and Trichoderma virens strain G-41)*

- **What is it?** Beneficial microbes (live spores of *Trichoderma harzianum strain T-22*, and *Trichoderma virens strain G-4*). Prevention and control of major root and soil borne diseases up to 12 weeks.
- **How does it work?** The actively growing fungi form a “shield” by growing around the roots. Forming that “shield” right away is key to preventing pathogens from damaging the roots.
- **Application:** Soil drench, in-furrow spray, chemigation, seed treatment and cutting or bare-rooted transplant dips. Apply early before roots have emerged or fully developed. Rate: 3 - 8 oz. per 100 gallons of water, or 1 - 2 tbs. per 5 gallons. 0-Day PreHarvest Interval (PHI)
- **Shelf-life:**

|               |                    |                  |                 |
|---------------|--------------------|------------------|-----------------|
| Frozen (< 32) | Refrigerated (<40) | Room temp(70-75) | Outdoors >75)   |
| 12 month      | 10 month           | 4 month          | 1 month or less |

**Price: \$135 (1 lb)**
