RE: Blood Meal without Additives

We represent that the Wilbur-Ellis Blood Meal sold by Wilbur-Ellis Feed, LLC has no antioxidants or additives used in the processing of the meals.

Blood Meal is processed by our suppliers at temperatures averaging 230 degrees under negative air conditions for at least 20 minutes.

Blood meal is received at our production facility in acceptable inspected bulk trailers. The trailers must have an acceptable previous load or a washout.

Product is placed in a dedicated bin in the non-ruminant warehouse. It is then packaged in totes or bags or sent out in bulk trailers. Our plant only handles feed ingredients and there are no synthetic fertilizers anywhere at our facility.

Sincerely,

Eric Johansen
Quality Manager
Wilbur-Ellis Feed, LLC
